- Private placement dollar volume of \$1.3bn up sharply in Q2 2024 with average deal size of \$169m

# DEVOPS SECTOR TAXONOMY

MULTIPLE DISCIPLINES HAVE CREATED A FRAGMENTED MARKET RIPE FOR CONSOLIDATION

## Platform / Workflow

- Agile development
- PaaS and IaaS
- Continuous Integration/ Continuous Delivery (CI/CD) platforms
- Collaboration and workflow orchestration
- Container management

## AI Applications

- AI used to create applications
- Integration of AI-generated data

## API Management

- API development, management and integration
- API testing

## Low- and No-Code

- Application and GUI development platforms
- Automated testing and integration
- Focus on workflow-based applications and web/ mobile apps

## Testing / QA

- Quality assurance
- Functional testing
- Performance and load testing
- Test data management
- API testing

## Infrastructure Management

- Network and infrastructure monitoring
- Root cause analysis
- IT asset management

## DevSecOps

- Static Applications Security Testing (SAST)
- Software Composition Analysis (SCA)
- Code governance

## Blockchain Apps

- Transaction or rules-based apps
- Provides high levels of security and auditability

## Service Management

- Change management
- Trouble ticketing
- Incident response

## Performance Management

- Log management
- Load management
- Performance analytics

# 6 KEY TRENDS DRIVING INNOVATION AND CONSOLIDATION

## LEVERAGING AI AND OTHER TECHNOLOGIES TO AUTOMATE DEVOPS

### Growing Role of AI in DevOps

- In the quest for faster release cycles, more automation and less human error, AI is being applied to the development and deployment of software applications.
- AI is being used across the entire DevOps chain including CI/CD, test automation, security, anomaly detection and documentation.

### Increasing Reliance on Open-Source Code

- While the proliferation of open-source code offers software engineers substantial savings in time and expense, security can be compromised by incorporating unknown vulnerabilities into otherwise secure applications.
- Licensing and documentation risks may also arise requiring additional resources to manage.

### DevSecOps Becomes Mainstream

- Traditionally, engineering teams automated nearly all their software development pipelines while security was often neglected.
- Integrating development, operations, and security is now common practice and reflects corporate requirements to enhance security throughout the development cycle.

### Low / No-Code Development

- Democratization of writing code combined with DevOps enhances the flexibility to augment features without extensive coding processes – facilitating corporate competitive advantage.
- Gartner projects this year that low/no-code will account for more than 65 percent of application development operations.

### Deployment via Serverless Computing

- Traditional application deployments incur fixed recurring costs, irrespective of the processing activity – whilst in serverless deployments, customers only pay for consumed services.
- DevOps teams are adopting serverless architectures to reduce costs and streamline pipelines.

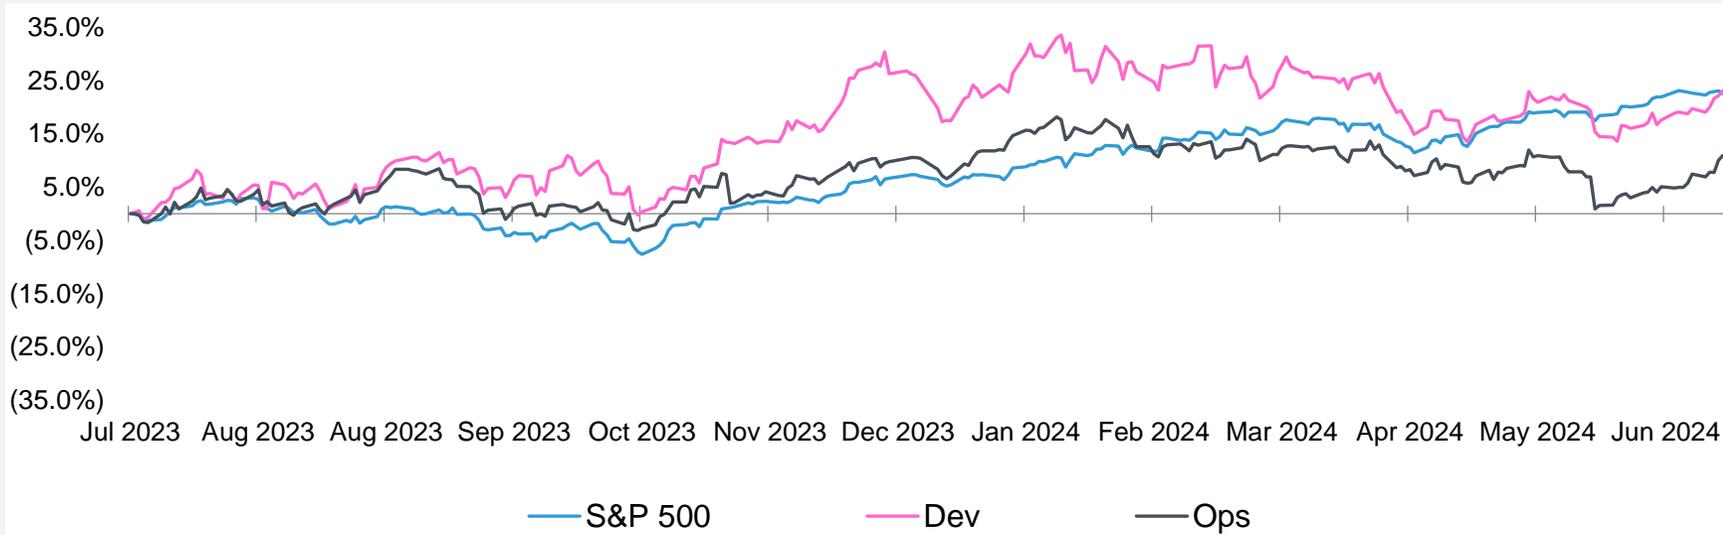

## K8

### Integration of DevOps and IT

- DevOps teams have inherently similar needs to IT Departments, including workload management, monitoring and testing, and cybersecurity.
- These disciplines are increasingly being adopted in the software development cycle, making the transition to general availability more seamless, predictable and secure.

# CAPITAL MARKETS PERFORMANCE
